1. Overall, how would you evaluate this person's performance?

In evaluating an employee's performance, focus on two crucial aspects:

- 1. Performance Against Role Responsibilities:** Assess how effectively the individual meets the specific responsibilities and skills required by their role. This includes evaluating their proficiency in executing tasks unique to their position and their success in achieving the objectives that are vital to the team's and the broader organization's success.
- 2. Adherence to Role-Level Qualities and Core Skills:** Review the employee's performance in relation to the qualities and core competencies expected at their level within the organisation. This encompasses an evaluation of their professional behaviour, teamwork capabilities, problem-solving skills, and adaptability, ensuring they fulfil the standards expected for their role.

Inconsistently Meets Expectations

Meeting expectations less than 75% of the time. Additional direction and support are needed. Willing or able to improve but lacks results required for the role.

✓ Consistently Meets Expectations

Meets expectations 90+% of the time and exceeds them less than 25%. Achieves a majority of the objectives for the role.

Often Exceeds Expectations

Meets expectations 90+% of the time and exceeds them more than 50%. Requires little to no additional direction to achieve role objectives.

Sets a New Standard

Meets expectations 100% of the time and exceeds them more than 75%. Influences others to perform better.

2. Which role responsibilities have they shown strength in?

Role Objectives are detailed in a person's Job Description. Describe the specific responsibility where they often meet or exceed expectation. In your response, state if this is a skill that meet or exceed expectations.

- Software development: Played a key role in several step-changes in implementation of systems: template automation (which reduced waste), qualification types (which created optionality), dynamic grid UIs (which improved user experience).
 - Problem solving: Very quickly got to the bottom of a number of issues/incidents. Has prioritised becoming fluent in and leveraging a range of tools to investigate: logs, X-Ray, database tools, tableau reports, etc.
-

3. Which role responsibilities could they improve on?

Describe the specific impact they could achieve and behaviours they would need to exhibit.

- Software development:
 - Finer-grained modularity (overlapping with functional paradigms): can lead to engineers having to hold less in their head at once, having to change less code at once, lower risk, greater opportunity for reuse, greater testability, etc.
 - Parallel change / expand-and-contract: reduces risk of changes, can avoid race conditions and downtime, and often inspires better design (esp. when we later decide to keep previous behaviour for some subset of use cases).
 - Breaking problems down as small as possible: reduces risk, over-engineering, enables front-loading value, etc.
 - Modularity + breaking problems down = incremental refactoring / tidying: getting meta now, but it's a *less risky way to reduce risk!*

- **Software architecture:** Piclo would hugely benefit if we could shift our 'default' approach to implementing new functionality to be more scalable from day 1 (likely by employing more cloud-native approaches), to reduce a major risk we currently take on with most new functionality. Even though we're barely scratching the surface with these patterns, Oliver and his team currently use these patterns more than most other teams (e.g. step functions for file processing), which makes them well-placed to lead by example and help us take this further.
-

4. Which Piclo Qualities and Core Skills have they shown strength in?

Describe the specific impact they had and behaviours they exhibited. Limit your focus to 2-3 points.

- **Communication:** Consistently clear, usually a suitable level of detail, and tailored to the audience. This results in others understanding problems and complex topics quickly, issues being resolved quickly, and Oliver collaborating very effectively with people across the company.
 - **Empathy:** When the team adopted changes to ways of working, Oliver made a point of highlighting the impact on individual members of his team, and sought to find tweaks/interpretations which still achieve what was intended by the changes while fitting the team better. This improves those individuals' experience at Piclo and makes initiatives like this more likely to succeed.
 - **Initiative:** Consistently proactive, insightful, and dedicated to his team and Piclo.
-

5. Which Piclo Qualities and Core Skills could they improve on?

Describe the specific impact they could achieve and behaviours they would need to exhibit. Limit your focus to 2-3 points.

- **Strategy:** Oliver's other skills make him well-placed to play a more prominent part in strategic planning in both technical areas and product development more widely, such as identifying and leveraging opportunities to adopt new/better approaches, and deciding the direction of our capabilities.

6. Summarise progress made against goals.

Provide details about the progress made against goals, callout any blockers, and reference changes that should be considered for the next round of goal setting.

- Merged a first version of a Feature Removal Assistant to lower the cost of making releases safe.
- Played a significant part in various system improvements which enabled SO specific configuration, e.g. the Competition Behaviours initiative.
- Oliver held group discussion/coaching sessions with his team, and feels they have made visible progress as a result.

7. Provide any additional information that you would like to include in this evaluation that wasn't captured in the above form.

This could include any impact they had outside their day-to-day role, situations that impacted the organization or team, or any other information that might provide context to the review.

Review acknowledgment Completed

I acknowledge my performance review discussion has taken place and I understand the content of my review
