Fault Description:

FLUE NOT SEALED INTERNALLY. UNABLE TO CHECK EXTERNALLY

FLUE TOO CLOSE FROM EXTRACTOR FAN VENT

Corrective Actions:

FLUE TO BE SEALED INTERNALLY

ATTACH PLUME KIT TO FLUE, MOVE FLUE OR MOVE VENT.

ID

- With your permission the gas supply to the Appliance/Installation has been **disconnected** and a WARNING label attached or -
- Permission was not given to make safe, the gas provider will be notified. A WARNING label has been attached.
- RIDDOR**. A defect has been identified on the installation which has been reported to the Health and Safety Executive.

AR

- With your permission the gas supply to the Appliance/Installation has been **turned off** and a WARNING label attached or -
- Permission was not given to make safe. A WARNING label has been attached.
- WARNING notice**. Turning off will not reduce the risk. A WARNING label has not been attached.

The responsible person was not present. Where possible the gas installation has been made safe and this record left on the premises. ☐

PLEASE NOTE: Registered gas operatives are required by law to report cases where they are refused permission to disconnect an ID gas installation to the Gas Emergency Service call centre for Natural Gas, or for LPG, the Supplier. All Gas Transporters operate a Gas Emergency Service and have all the powers under the Gas Safety (Rights of Entry) Regulations to visit properties and disconnect unsafe gas appliances/installations.

As the Gas User/Responsible Person: I confirm that I have received this Warning/Advice Notice concerning the safety of the gas installation. I understand that the use of the Appliance/Installation in the case of an **IMMEDIATELY DANGEROUS** or **AT RISK** installation could present a hazard and could place me in breach of the Gas Safety (installation and use) Regulations.

Signed: Chloe Chousmer-Kerr Date: 5/11/24
Print Name: CHLOE CHOUSMER - KERR

I confirm that the situation(s) recorded above, have been identified and brought to the attention of the Gas User/Responsible Person in accordance with the Gas Safety (Installation and use) Regulations (GSIUR), Industry Standards and Procedures.

Safety Warning

Dear Customer,

An engineer visited you today and discovered that part of your gas installation either did not meet current standards or was unsafe.

To continue using an appliance or installation that is deemed 'At Risk' or 'Immediately Dangerous', could put your property or life in danger.

In order for you to understand the impact of your situation, please find below a detailed description of your appliance/installation classification. Please also see the **WARNING NOTICE** completed by our engineer overleaf.

Immediately Dangerous (ID) Danger Do Not Use ☐

This means your appliance or installation presents an **immediate danger** to life if you continue to use it. Our engineer will have asked your permission to make the appliance inoperative by disconnecting it from the fuel supply and it **should not be used** until the faults have been rectified by a competent registered gas operative. Using the isolated installation or equipment before it has been repaired would be extremely dangerous. **It is an offence to use a gas appliance or installation knowing it to be dangerous.**

RIDDOR ☐

This means a defect has been identified on the installation which has been reported to the Health and Safety Executive. Advice on corrective action has been provided on this form.

At Risk (AR) Danger Do Not Use ☐

This means your appliance or installation has one or more recognised faults and if you continue to use it, your appliance or installation may in the future if operated constitute a danger to life or property. You should not use the appliance/installation until the faults have been rectified by a competent registered gas operative. **It is an offence to use a gas appliance or installation knowing it to be At Risk.**

At Risk - WARNING Notice ☐

In a limited number of cases, 'turning off' will not reduce the risk. A WARNING label has not been attached but the risk must be further investigated. The WARNING notice will advise who you should contact to undertake this work.

What to do next for At Risk (AR) / Immediately Dangerous (ID)

A WARNING label will have been attached to remind you that the appliance is dangerous and must not be used. For ID situations; with your consent, the equipment has been disconnected from the gas supply. If you do not give consent for our engineer to disconnect your appliance he/she is obliged to inform your gas supplier who will take any action they feel necessary.

We would like to advise you that we are unable to schedule any call-outs until the necessary remedial work has been completed. Please be aware that if you have a Service Plan with us, this also applies and you have 28 days from today's visit to rectify the faults and restore your boiler to the current regulatory standards. No refund will be given for the period during which the notice applies. We hope that you will be able to arrange for this work to be done as soon as possible so that we can continue to support your appliance.

Your engineer will have explained the problem and offered the best possible advice for remedial action. You can use any competent registered gas operative to carry out the remedial works. For a list of Worcester Accredited Installers please visit our website: www.worcester-bosch.co.uk

Where an appliance or installation is unsafe, it is possible that carbon monoxide may be produced, particularly where there is a problem with your flue and/or ventilation. The possibility of this happening is greatly reduced if appropriate action is taken to correct the faults.

If you rent your property and the equipment is the responsibility of the Landlord, Housing or Local Authority, you should inform them of the situation immediately.

Please inform us immediately on completion of remedial work emailing: salesandservice.support2@uk.bosch.com or writing to:
