EXAM#	TYPE/EXAM	RESULT
-------	-----------	--------

001050567	CT/CT Urogram	
-----------	---------------	--

EXAMINATION:
CT Urogram

CLINICAL INDICATIONS:

Stable with reduced renal function on right (26%). Right-sided abdominal pain, mainly at night. Query cause

REPORT:

Precontrast and delayed urographic phase scans have been obtained using a standard CT IVU protocol.

General findings:

The lung bases are clear.

The liver looks normal. No focal liver lesions are identified and there is no duct dilatation. The gallbladder looks normal with no calcified stones. The pancreas, adrenals and spleen look normal.

There is no lymphadenopathy or ascites.

The stomach and small bowel look grossly normal. The colon is unprepared but no obvious large bowel pathology is seen.

No focal sinister bone pathology is seen.

Renal tract findings:

There is volume loss in the right kidney with some focal cortical scarring. The collecting system is slightly patulous but there is no renal calcification or hydronephrosis and the right kidney drains normally. The left kidney is of normal shape and size. No renal calcification is identified and there is no hydronephrosis. The collecting systems, ureters and bladder have been well demonstrated and look normal.
