

Estimate of Rebuilding Cost from BCIS.

The rebuilding cost is estimated to be £300,000 based on the information and assumptions listed below (1).

Quality and facilities make a big difference to the rebuilding cost. While the figure above is a reasonable estimate of the likely cost for a good quality house with typical facilities, a basic quality house of the same size with minimal facilities might be rebuilt for £249,000 while an excellent quality house might cost £404,000 to rebuild.

The information we based this estimate on was:

Terraced 2 storey house built with brick external walls (2) and tile roof built around 1900 (3). The property is not listed and does not include any special or unusual features.

Postcode CV34 4PX.

Gross external floor area: 103m² (4).

1 bathrooms.

No separate garage.

A cellar (but not a full basement) is included.

BCIS has assumed the following:

An allowance for external works has been made which might typically comprise drive or hardstanding, paths and patio, walls and fences, drainage. However there can be big differences in the scale and cost. Special or unusual features, such as long boundary walls, swimming pools etc have not been allowed for.

The prices used are for March 2024. This report was generated at 21:56:44 on 03-Apr-2024.

Notes:

(1) This estimate is based on minimal details. If you have a listed property or one with special or unusual features you should obtain professional advice on the rebuilding cost. You may also wish to obtain professional advice to be more certain about the rebuilding cost. A list of chartered surveyors in your area capable of carrying out a rebuilding cost assessment can be found at <http://www.ricsfirms.com/>.

(2) Brick external walls include brick faced timber framed houses and cement rendered walls.

(3) It is assumed that the property is built in a style typical of its age.

(4) The Gross External Floor Area is the area of all floors added together measured from the outside.
