Dear Mr Yerbury-Hodgson

Oliver Yerbury-Hodgson d.o.b.05/09/1995
55 Avon Street Warwick CV34 4PX

Diagnosis: Confirmed adult foot collapse, mainly affecting the right side with subfibular impingement symptoms.

Treatment today: Discussion about the outcome of the x-ray and the MRI. I have explained the natural history of flat foot to you. The good news is that the tendons, ligaments, and the joints are still flexible and functional.

Plan: Review after intensive physiotherapy for gait education, shoe wear modification, arch support, and arch strengthening. We will hit it hard with the physiotherapy and see how it goes, and I will see you again in early September to see how you are getting on.

Yours sincerely

Tarek El Gamal (electronically checked and sent to avoid delay)

Mr Tarek El Gamal
Consultant Orthopaedic (Foot and Ankle) Surgeon
